

Waste Water Treatment

Step Screens VTR

14

Description ▼

VTR Step Screens, designed for in-channel installation, are used for fine screening of waste water.

They consist of two sets of lamellae - a mobile and a fixed one - which are separated by 3 or 6 mm spacing. The special arrangement of the lamellae forms filtering steps.

Waste water is screened while the lamellae steps withhold the screenings. Throughout the operation the mobile lamellae lift the screenings step by step until they are dropped off on the fixed lamellae. The inorganic particles in the waste water flow are withheld by the screen forming a "screenings mat". In this way, the water level upstream rises making the filter surface wider while the "screenings mat" on the screen keeps finer and finer particles.

As soon as the upstream water level reaches a set height, the screen starts its cycle rising up a step.

During the cycle, the mobile lamellae lift screenings onto the next step until they reach the outlet for discharge.

Application ▼

Benefits ▼

- ✓ High efficiency equipment;
- ✓ Savings in operating costs, maintenance and operator attendance;
- ✓ Self-cleaning screen thanks to mobile lamellae;
- ✓ Low operating costs;
- ✓ Available also in stainless steel tank, with nozzles.

Waste Water Treatment

Step Screens VTR

Technical Features / Performance ▼

- ▶ Different up to 1,800 mm wide sizes available
- ▶ Discharge height from 1,400 up to 3,500 mm
- ▶ 3 and 6 mm spacing available
- ▶ 55 degree incline angle
- ▶ Available also in stainless steel tank, with nozzles
- ▶ Material: 304 L / 316 L SS
- ▶ Control panel (optional)

Overall Dimensions ▼
